

Jake Januszanis

San Diego, CA

(619)-961-3979

jjanuszanis94@gmail.com

Skills

Languages: JavaScript, TypeScript, Python, Java, SQL

Frontend: React, HTML, CSS, Styled Components

Backend: Node.js, PostgreSQL, REST APIs

Testing: Jest, React Testing Library, Cypress

Tools: Git, GitHub, GitLab, Jira, Asana, Figma, Cursor, Mapbox, Chart.js

Experience

Software Developer

January 2022 – April 2026

Sawatch Labs (Wex Inc.) - Remote

- Developed React dashboards and internal tools that enabled customers and analysts to evaluate EV suitability, emissions impacts, and operational costs using large-scale telematics data.
- Optimized dashboard performance by migrating vehicle trip aggregations and summary calculations to backend APIs and PostgreSQL, improving responsiveness for large fleets and reducing frontend complexity.
- Designed and developed a self-service location management tool that enabled analysts to consolidate fragmented GPS parking locations, improving the accuracy of location-based reporting while eliminating manual database updates.
- Developed unit and integration tests for complex telematics calculations using Jest and React Testing Library, increasing automated test coverage and preventing downstream regressions in production releases.
- Streamlined the feature request process by introducing structured request templates and dedicated channels for features, bugs, and UI improvements, reducing ambiguity and improving sprint planning.
- Mentored a junior developer through code reviews, debugging sessions, and knowledge-sharing sessions, helping them ramp up on the codebase and products.
- Deployed features across development, staging, and production environments while performing manual QA and regression testing to ensure stable releases.

Education

Western Governors University

July 2026

B.S. in Computer Science
